

Pre-Test Eligibility Criteria

Purpose: Each campus may nominate students from the 2028 batch who meet the mandatory criteria (1–4) to sit for the coding test. Criterion 5 is preferred, not required. The bar rewards proven building ability and AI fluency, not CGPA.

#	Criterion	What the student must show
1	Coding Mastery (Verified) <i>Proof over CGPA</i>	• Languages: at least one OOP and one scripting language. • Proof: a rated profile (LeetCode / Codeforces / CodeChef) above an agreed threshold, OR a GitHub with real, regular commits. • Owning a GitHub profile alone does not count.
2	Real-World Projects (Built & Deployed) <i>Builders, not just coders</i>	• 2–3 working projects beyond college coursework. • Must be live: a public link, demo, or app-store listing, not just local code. • Bonus: real users, or a relevant tech stack (cloud, databases, or data/ML).
3	AI-Augmented Building <i>The AI-first edge</i>	• At least one project that uses AI (LLM / RAG / agents) OR was built with AI coding tools (Claude Code, Copilot, Cursor). • Must explain how they directed the AI, not just “I used ChatGPT.”
4	Cloud & System-Design Basics <i>Thinks in architecture</i>	• Any one of: a project deployed on AWS / GCP / Azure; a relevant cloud cert (e.g. AWS Cloud Practitioner); OR a short write-up of one project’s architecture and trade-offs. • Screens for architectural judgement at intern level.
+	Collaborative Development <i>Preferred, good to have</i>	• Any team or shared-codebase work: hackathons, group projects, or open-source contributions. • Solo projects are also fine. This is a plus, not a gate.

Nominating Students

- Criteria 1–4 are mandatory (pass/fail); criterion 5 is preferred.
- If more students meet the criteria than can be nominated, rank by depth of criteria 2–5 (projects, AI, cloud, and collaboration) and nominate the strongest.
- Candidates submit links (profiles, repos, live projects) for verification, keeping it evidence-based, not self-reported.

Existing process after this filter: Coding Test → Aptitude Test → 3 Technical Rounds.
